```
Caesar cipher

Assume that plaintext e(5) corresponds to ciphertext K (11).

CT = pt + key mod 26

Int(1) = Solve 11 = 5 + key, kelly, kelly, kelly and kell lust a 26

Out(1) | New of the plaintext e(5) corresponds to ciphertext C (3).

CT = pt * key mod 26

Int(2) = Solve 3 = 5 * key, kelly, kelly and kell lust a 26

Out(2) | New of the plaintext e(5) corresponds to ciphertext N (14) and plaintext t (20) corresponds to ciphertext O (15).

CT = pt * multiplicativekey + additivekey mod 26

Int(3) = Solve 14 = 5 * multiplicativekey + additivekey && 15 = 20 * multiplicativekey + additivekey, multiplicativekey, additivekey, local lust a 26

Int(3) = Solve 14 = 5 * multiplicativekey + additivekey && 15 = 20 * multiplicativekey + additivekey, multiplicativekey, additivekey / local lust a 26
```

Out3= multiplicativekey $\rightarrow 7$, additivekey $\rightarrow 5$
